Don’t just upgrade…

...EVLOLVE with Teamcenter 9

Now is the time to fine-tune your PLM strategy, take advantage of new capabilities and extract more value.

Investing in the evolution of your PLM platform can yield tangible benefits that are often much greater than the returns realized from your initial implementation. Your business needs and PLM capabilities keep changing.

Siemens’ latest release of Teamcenter represents a giant leap forward in usability, functionality and decision making. Organizations that upgrade to Version 9 will enjoy a wide variety of improvements, including:

- Better visibility into the impact of decisions through Active Workspace
- Integrated strategic portfolio planning with tactical program and project management for better investment decisions
- Fully integrated systems engineering and requirements management
- Enhanced content management supporting configuration-driven documentation
- Improved service lifecycle management
- Usability enhancements

Teamcenter 9 puts a strong emphasis on providing the right information at the right time to enable smarter product decisions – from portfolio planning and product development through manufacturing and support. Teamcenter 9 delivers many new capabilities and more powerful tools to help companies deliver increasingly complex products while maximizing productivity and streamlining global operations.

Thinking about upgrading?

Kalypso can help. We offer the only comprehensive set of services for Teamcenter, from world-class management consulting capabilities through full technical implementation services. For companies interested in upgrading to Teamcenter 9, Kalypso offers a better way to evolve, using our knowledge about what successful companies are doing to expand and improve their PLM processes and systems.

With a broadly scoped and well-implemented PLM solution, organizations can reduce costs, increase throughput, protect intellectual property, improve product quality, and accelerate time to market.

With an improved ability to anticipate changes and a flexible PLM infrastructure, your company can also respond more quickly and effectively to ever-changing customer needs, regulatory requirements, supplier capabilities, and competitive threats.

The Evolve Framework

At Kalypso, we are focused on helping our clients evolve their PLM processes. The Evolve Framework is designed to help Teamcenter customers stay ahead of the curve. By applying this framework, your organization will be able to anticipate needs and learn from the experience of others.
Our framework is comprised of four stages – stages that, when properly managed, can help companies to evolve PLM. The four stages are:

**Plan**
Create a plan to capture new PLM benefits

**Upgrade**
Leverage new Teamcenter capabilities

**Expand**
Implement new processes, capabilities & modules

**Optimize**
Fine tune processes to extract PLM value

Kalypso Can Help Guide Companies Through This Evolution

**Plan**
Understand how your company uses PLM today, benchmark process performance, and create a plan to upgrade and take advantage of enhanced capabilities. This stage evaluates organizational structures, business processes, product development strategies and use of PLM technologies, indentifying opportunities for improvement.

**Upgrade**
Complete the technical upgrade to Version 9 and train the organization to use the new capabilities, including new functionality in product analytics and quality, improved user experience, new document management capabilities and enhanced system administration tools.

**Expand**
Move beyond core data management and get more out of your PLM system. This stage is driven by business priorities - such as increased visibility into regulatory compliance, improved re-use of product designs, real-time visibility into projects with geographically dispersed teams, and improved information access and search. These priorities could be addressed with new Teamcenter modules and complementary products.

**Optimize**
Fine-tune and enhance PLM business processes, system management and decision-making. This stage ensures that all the primary forces of the PLM-enabled enterprise come together – including the enhanced technology, business intelligence, updated processes, and most importantly, the people who operate and use the system.

**How to Evolve**
Regardless of your Teamcenter version, implementation history or technical maturity, Kalypso can provide objective guidance to help you realize the full benefits of PLM. Our Evolve Framework can help you get started and take full advantage of the capabilities of an enterprise PLM platform like Teamcenter 9.

PLM is designed to grow in capability as organizations fine-tune their strategies, processes and systems. In today’s highly competitive environment, a flexible PLM platform is another way that your organization can stay ahead of the crowd. The rewards will go to companies who take the time and initiative to continually evolve with PLM.

Get started with a fixed price “Plan Phase” project from Kalypso and we will help you evolve.
